

## L181W Network Node Station

### Introduction:

L181W Network Station is part of the network lock system, they work as relay station to transmit the signal. L181W Network Station connect to PC via TCP/IP communicate between network lock and PC. Every floor requests at least one L181W wireless Node, if there is bend or corner that the signal can't transmit, add more wireless node.

### Specification:

1. Working Voltage: DC9-12V
2. Working Current: <100mA
3. Antenna: 17 cm
4. Distance: 15-20m
5. Communication: TCP/IP
6. Transmission Technology: Zigbee 2.4GHz
7. Dimension: 90\*90\*35mm
8. Working Temperature: 0°C-70°C
9. Working Humidity: 15-85% RH
